WOOD'S CROP SPECIAL

MAR 4 1930

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XXV.

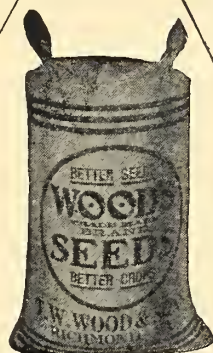

FEBRUARY EDITION

1930

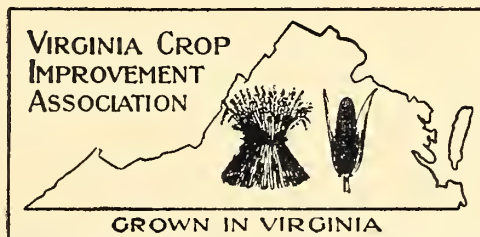

Known Origin Dependable Seeds

OUR GUARANTEE:

Wood's Seeds are thoroughly re-cleaned, tested and of the very highest quality. We guarantee them to be as represented in purity, germination and origin up to the full amount of purchase price. Owing to so many factors over which we have no control, such as weather, soil and seeding conditions, we cannot guarantee the crop. We offer you the best seeds because it is the fair thing to do and because we want to stay in business and grow.

LAST OFFICIAL TESTS OF FIELD SEED
Dealers made by the Virginia Department of
Agriculture places WOOD'S SEEDS at the top.

The Largest Handlers of Certified Seeds in the South.

Highest Quality Adaptable Strains

ESTABLISHED 1879

Throughout the world Wood's Seeds are well known for their high quality. Every year Wood's Seeds are shipped to all parts of the world, having the recommendation of the U. S. Government, as well as State Agricultural Departments. Their confidence is justified by our reliable service and fair dealings for over fifty years. We exercise every precaution to furnish our customers with the best strains of each variety of seeds, adapted to the various localities supplied.

Alfalfa,

WOOD'S CROP SPECIAL

GUARANTEED ORIGIN CLOVER SEEDS

The production of Disease Resistant Red Clover grown in the Northern Neck of Virginia is becoming an important crop in this locality.

INSIST ON U. S. VERIFIED-ORIGIN SEED

When Buying Red, Sapling and Alfalfa Clover

It is your guarantee of origin, verified by the U. S. Government, whose records begin with the grower and end with the consumer. This service rendered by the Government adds only an infinitesimal cost to the seed (less than 1½ cents per bushel), and is a very valuable aid to the farmer in being sure of obtaining genuine origin, adaptable and disease resistant seed, which is such an important factor in Clover Seed.

The price differential of the above Clover Seed from various geographical producing areas of the United States will range from \$1.00 to \$5.00 per 100 pounds, depending upon the particular section where grown. This accounts for the range of prices on Clover Seed generally offered throughout the country.

You will always find that there is little variation in prices of Verified-Origin seed produced in the same locality, and one should never make comparison of prices with offerings of Clover Seed that have not been verified and of doubtful origin. Every bag is sealed and carries the official Verified Certificate, giving State where grown and lot number, together with analysis tag. Wood's Trade Mark Brand is of the very highest quality, being exceptionally free from weed seeds.

RED CLOVER

In our own field tests and those of the various Experimental Stations of the East, it has been conclusively proven that Red Clover produced in Virginia, Michigan and Ohio is the best adapted and among the most disease resistant strains available. On this account we are only offering to our trade Clover Seed from these sections, which can be depended upon to give maximum crop results. In localities where anthracnose is prevalent, we recommend our Virginia-Northern Neck grown seed, which is a genuine disease-resistant strain, making a large, vigorous growth and longer lasting crop than seed from any other source.

The Michigan and Ohio grown Red Clover have given remarkably good results, being particularly adapted to the Piedmont and mountain sections of the Eastern States.

Verified by the U. S. Government
Highest Quality—Adaptable Strains

A GOOD YEAR

TO SOW CLOVER

Prevailing prices this season are at the lowest level since 1921, and are lower than last year by approximately \$11.00 per hundred pounds. Both Cow Peas and Soja Beans, from present indications, will command high prices, and figuring on an acreage planting cost will be considerably higher than Clover. The average acreage cost of seeding Red Clover this spring is \$3.00, which in comparison with summer legume crops is an economical crop to sow.

We wish to call particular attention to the very high grade quality of our TRADE MARK BRAND CLOVER SEED listed below. We have selected the finest lots of adaptable seed obtainable, and believe we can safely say there is not a higher grade line of Clover Seeds offered in the country today.

Every bag is sealed, and to it is attached an official Government Verified Origin tag.

NOTE HIGH ANALYSIS

— of our —

TRADE MARK BRAND CLOVER SEED

WHITE CLOVER...	99.20	95

* Indicates U. S. Verified Origin.

The above are actual tests, every lot containing less than 1/4 of 1 per cent weed seeds. Germination tests include slight percentage of hard seeds.

SAPLING CLOVER

Our seed is secured from the same producing sections as that of Red Clover, and is the genuine Sapling or Mammoth variety. The Verified-Origin service gives us double assurance of the true strain, as growers are required to make signed statements testifying as to origin as well as variety. You can depend on Wood's Trade Mark Brand Sapling Clover to give results.

ALFALFA

Every farmer should sow Alfalfa. It is one of the South's most profitable crops, and one that will pay constant dividends. Given a well prepared, well drained soil, an application of lime, and the use of adaptable seed with inoculation, a good permanent stand of Alfalfa can easily be established. Kansas and Utah grown Alfalfa have proven to be the most dependable and highest yielding strains for the Eastern States. For the Coastal section of Virginia and the Carolinas, northern Oklahoma Alfalfa will make an earlier and quicker growth. Grimm Alfalfa, on account of its deep root system and hardness, is preferable for the mountain sections where extreme cold weather is experienced, or wherever the soil is subject to heaving.

WOOD'S CROP SPECIAL

WHITE SWEET CLOVER

FOR HAY
FOR GRAZING
FOR SOIL IMPROVING

There is probably no other crop that will increase soil fertility as fast as Sweet Clover, if a reasonable stand and growth is obtained. In actual field tests, yields of corn have nearly doubled following this crop; besides its carrying capacity for stock as a grazing crop is double that of Blue Grass or mixed grasses. Under favorable conditions Alfalfa is its only competitor from the standpoint of enormous yields. Sweet Clover will grow on any type of soil, the main essentials for profitable crops are lime and inoculation, and unless these requisites are taken the use of Sweet Clover will mean a failure. It will not thrive satisfactorily on acid soils.

Sweet Clover, when cut at the proper stage, makes a palatable and nutritious hay crop, comparing favorably with Red Clover and Alfalfa hay in digestible nutrients. It can be satisfactorily sown with Spring Oats and Barley, and after the grain crop is harvested the clover will make a good growth, which can be used for pasture or as a soiling crop. However, larger yields are always obtained when sown alone, particularly if dry weather prevails.

THE USE OF HULLED AND UNHULLED SEED

Much has been said in the past few years regarding the use of unhulled seed. Experiments made at the Virginia

Experimental Station at Blacksburg, Va., with unhulled seed sown during January, February and early March have been highly satisfactory. The unhulled seed carries a high percentage of hard seed which will germinate quickly when subjected to thawing and freezing, so consequently it is very necessary to make early seedings of unhulled seed, particularly in the Coastal sections while these climatic changes exist. Generally speaking, our experience and that of many of the leading farmers in the East, is that the use of hulled and re-cleaned seed, sown the latter part of March, April and May, have given the best results, and is a safer method for seeding this crop.

Unhulled seed sown at the rate of 20 pounds per acre and hulled seed 15 pounds per acre have given the best results in the East. Inoculate the seed and cover them lightly. The soil should be limed as far ahead of seeding as possible, but good results are obtained when the liming is done just previous to seeding. Use 200 to 300 pounds of Super-Phosphate per acre if the soil is fairly fertile. If the soil is thin, use an equal amount of a complete fertilizer, such as 12-2-4. Fertilizer is not essential, but of course the Clover will respond to its use in making larger yields like other legume crops.

AN UNSOLICITED LETTER

From the Vice-President of the Virginia Crop Improvement Association.

Sparta, Va., Oct. 9, 1929.

May I, as Vice-President of the Virginia Crop Improvement Association and President of the Caroline County Certified Seed Growers' Association, congratulate you on the effort you are making in fostering the use of high quality seeds. Your page on certified seed in the October issue of **Wood's Crop Special** is especially gratifying to those of us who are using our efforts to promote the production and use of high quality seeds. From my observation and experience I believe I am safe in saying that you are doing more to promote the distribution and use of certified seeds and other high quality seeds than any other seed house in the State.

Yours very truly,

F. B. CALE.

Note—Mr. Cale has recently been elected President of the Virginia Crop Improvement Association.

WOOD'S SPECIAL GRASS AND CLOVER MIXTURES

For Permanent Hay and Pasture Crops

All of the leading agricultural authorities agree that a pasture mixture should contain a large variety of grasses in order to furnish grazing throughout the season. Our special mixtures are composed of over ten of the leading grasses and clovers, mixed in proper proportions for the various soils and purposes for which they are intended. Only our highest quality Trade Mark Brand Seeds are used, which accounts for the satisfactory hay and grazing crops that have been obtained by our customers. We wish also to call attention to **Wood's Southern Pasture Mixture**. Information and prices given on page 5 of this **Crop Special**.

From the No. 7 Meadow Mixture Grass Seed I received from you I have some wonderful fine grass now, and I think it will improve as it gets older. I always get fine seed from you. I order from you every year.—S. H. CUTLIP, Braxton County, W. Va., May 20, 1929.

I have a fine six acre pasture from the Mixture I ordered from you. It is fine, taking care of my hogs, sheep, mules and cows.—W. O. MANNING, Martin County, N. C., August 29, 1929.

I am more than satisfied with results from your No. 6 Hay Mixture seeded during the spring of last year. Have seeded three more lots this last March with the same Mixture.—J. R. HOWARD, Charlotte County, Va., June 5, 1929.

I have used your No. 8 Grass Mixture twice before last year and found it very satisfactory.—W. V. WEST, Sussex County, Va., May 23, 1929.

SEED OATS

The many letters of praise about our selected strains of Seed Oats is the best evidence of their crop producing ability. We use the utmost care in securing our seed stocks, only supplying the better grades of plump, heavy seed, which are much superior to the ordinary oats offered on the market.

Wood's Pedigree Fulghum Oats, in actual comparative field tests, are well ahead of all other spring varieties in production of grain, as well as leafy growth, which is most desirable when used for green feed. Pedigree Fulghums are our recommendation for your spring oat crop. When harvested for seed they bring a premium over other oats, with the exception of the turf varieties.

Burt or 90-Day is a popular variety in the Coastal sections of the South and for use on light soils. The White Spring and Swedish Select are better adapted to the Piedmont and mountain sections.

Why Use Wood's Fertilizers?

Because Wood's Standard Fertilizers represent the very best combination of plant foods. All raw materials are carefully selected for their availability as plant feeders and care is given in mixing them in correct proportions to insure a properly balanced ration of soluble plant foods for the different crops.

Standard Vegetable Fertilizer—8-4-4. 50 lbs. \$1.40; 100 lbs. \$1.90; 200-lb. bag \$3.50; ton \$33.00.

Standard Potato Fertilizer—Available Phosphoric Acid 7%; Ammonia 5%; Potash 7%. 50 lbs. \$1.20; 100 lbs. \$2.10; 200-lb. bag \$3.95; ton \$37.00.

Standard Corn Fertilizer—12-2-4. 200-lb. bag, \$3.15; ton, \$29.00.

Market Garden Fertilizer—8-5-5. 200 lbs. \$3.90; ton, \$37.00.

Super Standard Fertilizer—16-4-4. 100 lbs. \$2.30; 200 lbs. \$4.25; ton \$41.00.

"Standard" Fairgreen Fertilizer—(For Lawns). 100-lb. bag \$3.25; ton \$60.00.

Standard Bone Meal—3-22. 50-lb. bag \$1.60; 100-lb. bag \$2.75; 200-lb. bag \$5.00; ton \$48.00.

Standard Super-Phosphate—16%. 200 lbs. \$2.00; ton \$18.00.

Nitrate Soda—Champion Brand. In paper-lined waterproof burlap bags. Drills easily. 100-lb. bag \$3.25.

Arcadian Sulphate of Ammonia—50 lbs. \$2.25; 100 lbs. \$4.00; 200 lbs. \$7.50.

Wood's High-Grade Sheep Manure. 25 lbs. 85c.; 50 lbs. \$1.40; 100-lb. bag \$2.50; ton \$45.00.

Vigoro (Swift's Plant Food). 5 lbs. 50c.; 25 lbs. \$1.75; 50 lbs. \$3.00; 100 lbs. \$5.00.

Hydrated Lime—10 lbs. 25c.; 50 lbs. 75c.

WOOD'S CROP SPECIAL

WOOD'S EARLY YIELDING COTTON SEEDS

An individual plant of Wood's Ingold Cotton grown by W. D. Holland, Harnett County, N. C. Mr. Holland is an enthusiastic booster of this cotton, and is now planting his entire crop in Wood's Ingold.

Raised at the Top of the Belt—Bred for Earliness and Yield—Several Weeks Earlier Than Other Strains—Getting Ahead of the Boll Weevil.

These are the main reasons for the increasing popularity of our improved early strains of cotton seed. Leading cotton growers in practically every section of the South are rapidly beginning to see the many advantages of **WOOD'S COTTON SEEDS**. Generally speaking, those who have used our Northern grown seed have obtained twice the yield of their neighbors, and are making cotton a profitable crop to grow.

WOOD'S INGOLD COTTON

Highest Yields of Lint—Earliest of All—1 1/16 Inch Staple—Largest Bolls—39 Per Cent. Lint—1 1/3 Bales Per Acre.

Wood's Ingold Cotton yields more lint per acre than any other variety. This has been proven by actual tests and field results made by Experiment Stations and farmers in many States. There is no variety that matures earlier than Wood's Ingold, maturing with Early King. It consistently turns out 39 per cent of lint, producing a good quality staple, 1 1/16 inches in length, which brings the very top market price. It is a large boll cotton with small seed, making a larger boll than the Mexican Big Boll. Ingold is a very heavy fruiting cotton, some plants having as many as 90 bolls. Grows very upright and compact, with thin foliage that allows the sunlight to penetrate, killing the boll weevil larvae and reducing disease. It is easy to pick, but does not blow out.

WOOD'S CERTIFIED TRICE COTTON

Highest Yields of Seed Cotton—Early as Early King—Large Bolls—1 1/16 Inch Staple—1 1/4 Bales Per Acre.

The Virginia Experimental Station and the U. S. Department of Agriculture bred up and produced the seed of this variety, which we distribute, being certified by the Virginia Crop Improvement Association. At the Louisiana State Experiment Station Certified Trice Cotton yielded the highest value per acre of ten varieties. In seed production it outyields all other varieties, making 1800 to 2000 pounds consistently and running in some instances as high as 2700 pounds per acre.

COKERS—CLEVELAND No. 5

(An Improved Strain of Cleveland Big Boll)

1/16 Inch Staple—Recommended by the North Carolina Experiment Station.

Our strain of Cokers-Cleveland No. 5 is raised for us under the supervision of the North Carolina Experiment Station, and is recommended by them to cotton growers in that State. It is an early maturing strain, high yielding and has 1 1/16 inch staple and 39 per cent turn out of lint.

WOOD'S IMPROVED EARLY KING

Still an old favorite among cotton growers and a particularly good cotton for poor land, or where no premium is paid for staple.

MEXICAN BIG BOLL

This variety has the recommendation of Dr. Winters, of the North Carolina Experiment Station, because of its long staple (1 1/8 inch), large bolls, easy picking and high yield.

WOOD'S VIRGINIA GROWN SECOND CROP POTATOES

Raised From Certified Seed

These potatoes are the choice of leading potato growers in Virginia and the Southern States. There preference is due to the more satisfactory and dependable crops, being better adapted to our climatic conditions than Northern grown seed. Being somewhat smaller in size than Northern seed, the acreage planting cost is 10 to 15 per cent less. Letters of praise from practically every section of the East are good evidence of their fine yielding qualities:

1512 Bushels From 50 Bushels Planted.

"I will tell you how I came out on the 50 bushels of potatoes I received from you last year. I made 1512 bushels, just lacking three bushels of making 30½ to one. I like your Virginia Second Crop seed fine. This is the twenty-fourth year I have been raising from your seed."—SAMUEL T. LLOYD, Albemarle County, N. C., January 13, 1930.

"I planted 22½ bushels of your Second Crop Irish Cobblers last year and dug 500 bushels."—W. P. BELL, Hamilton County, Tennessee.

MAINE AND PRINCE EDWARD ISLAND COBBLERS

Our stock of these varieties are of the finest quality obtainable, grown particularly for seed purposes. They are dependable stock, free from disease, and their use will make better and larger yielding crops. A complete list of varieties we can now offer will be found on page 4 of this Crop Special.

"I bought five bags of Virginia Second Crop Irish Cobbler Potatoes this past spring from you and raised one hundred and sixty-five barrels."—B. J. MIDYETTE, Hyde Co., N. C.

TUNE IN ON WRVA

Every night at 7:15 P. M. Eastern Standard Time (just after "Amos and Andy"), for the latest weather report, which is sent each evening by T. W. Wood & Sons as an aid to farmers and gardeners in planning their operations.

 Price Nos. 3, 7, 8 and 9: ½ bus. size 40c.; 1 bus. size 65c.; 5 bus. size \$2.25.

CYCLONE SEED SOWER

Sows grass and clover seeds and grain of all kinds faster and more evenly and uniformly than is possible by hand. It will sow as fast as you can walk, and the quantity can be regulated to any amount to the acre.
 By mail postpaid \$2.20. Not prepaid \$2.00

CAHOON SEED SOWER

Sows any of the seeds that are usually sown broadcast, such as clovers, grasses, millet, buckwheat, vetch, turnips and all grains, and will do it more evenly than you can possibly seed them by hand. Can be regulated for thick or thin seeding as you prefer. Holds 22 quarts.
 By mail postpaid \$5.10. Not prepaid \$4.75

CRO-TOX

INSURE YOUR SEED CORN AGAINST ATTACKS OF CROWS AND PHEASANTS

All growers of seed corn are rapidly realizing the fact that crows, pheasants, blackbirds and other corn-pulling birds and animal pests are causing havoc and untold damages to corn while it is germinating, sprouting and rooting, and that protection must be given growing corn during that stage. Thus, the ever-increasing demand for an efficient remedy to combat this tremendous loss has prompted the research, development and perfection of our "Crow-Tox" Repellent.

Small can treats 1 bushel of corn, \$1.10
 Large can treats 2 bushels of corn, \$1.65
